

ROLLING BEAM ANCHOR

The Rolling Beam Anchor attaches to structural steel beams to create a movable rolling anchorage point for fall arrest systems. It adjusts to fit various beam widths and allows the user to move safely along the length of the beam.

FEATURES

- Provides a movable anchorage point that travels along the beam with the user
- Ensures continuous fall protection across the beam length
- Adjustable flanges to fit different beam sizes
- Smooth-rolling wheels for easy and stable movement
- Highly corrosion-resistant and easy to install
- Suitable for flange widths from 80 mm to 250 mm

MATERIAL

- Aluminum Alloy & Stainless Steel
- Anodized finish

WEIGHT & HEIGHT

- 3.90 kg $\pm$ 0.01 kg

STRENGTH

- Minimum Breaking Strength: 23 kN

EN 795:2012 Type B
