

## ROUND BAR BRACKET

The Round Bar Bracket is designed to provide a secure mounting point on round structural bars or pipes for fall protection systems. It clamps firmly onto the round bar structure, allowing the installation of anchorage devices or lifeline components used during work at height. Its durable construction ensures reliable support in demanding industrial environments such as roofs, towers, platforms, and steel structures.

### FEATURES

- Suitable for roofs, overhead cranes, power towers, platforms, and similar structures
- Designed for installation on round bars or pipe structures
- Provides a secure mounting bracket for fall protection systems
- Clamp-type installation for stable attachment
- Designed for single-user use

### MATERIAL

- V4A Stainless Steel

 EN 795:2012, Type C
