

SLIDING BEAM ANCHOR

The Sliding Beam Anchor ensures your safety at all times when working on steel beams in roofs, overhead cranes, power towers, platforms, and similar elevated structures. When used along the beam, it moves smoothly with the user, allowing continuous and secure anchorage throughout the work area. In most applications, this system provides uninterrupted fall protection, enabling users to work efficiently without the need to disconnect and reconnect. The Sliding Beam Anchor is easy to use, suitable for harsh environments, and designed with a durable, high-quality finish.

FEATURES

- Designed for one user only
- Suitable for overhead cranes, power towers, platforms, and similar steel structures
- Smooth and continuous movement along the beam

MATERIAL

- V4A Stainless Steel

CE DIN EN 795:2012 Type C
CEN/TS 16415:2013

USED IN INDUSTRY
